

SUBMARINE OFFICER AC ELIGIBILITY

In April 2013, the Department of the Navy Director, Acquisition Career Management (DACM) eliminated the **AC Eligible** option from the Navy Personnel Command (NPC) sponsored administrative Acquisition Corps (AC) selection board process and reserved the AC Eligible designation for internal use and management by the Unrestricted Line officer (URL) Community leadership. Due to the standard 1120 career path the large majority of 1120 officers desiring to become members of AC would not meet the requirements for full AC membership and must pursue AC Eligible designation.

Candidates for designation as SUB AC Eligible must meet the following requirements:

- Commander Command screen
- Must submit email request to the SUB AC Community Manager (CAPT Adams) requesting Submarine Acquisition Corps Eligible designation. The email must include the following:
 - A statement "I understand that if I am approved for Submarine Acquisition Corps Eligible designation, I will become a member of the Department of the Navy Acquisition Workforce and will be detailed into an Acquisition coded position following completion of my post-Command waterfront tour or at the earliest possible opportunity. Additionally, I understand and acknowledge that I will have two years from the date I begin serving in an acquisition coded billet to complete all the requirements for Acquisition Corps Membership."
 - A statement that the applicant releases all fitness reports for the SUB AC Eligible selection process.
 - A completed Submarine AC Candidate Information Sheet.

Applications for SUB AC Eligible designation are due by 08 July 2016. The SUB AC Eligible selection process will be conducted the week of 29 August 2016. SUB AC Eligible quotas are available for YG 94, 96, 97 and 98. Submarine AC Candidate Information sheets are available by contacting the SUB AC Community manager, CAPT Douglas Adams, at douglas.j.adams@navy.mil. Applicants are encouraged to contact CAPT Adams prior to submitting their final application.
